

Dear Dr. Friedman -

June, '99

I want to let you know that I very strongly oppose genetic engineering of our food supply. But since it is now ubiquitous, it must certainly be labelled so that consumers can make informed choices about what goes into their bodies & those of their families.

Please support the National Organic Standards Board's recommendation to prohibit genetically engineered organisms & their derivatives from organic production & handling systems. Those of us who buy organic to protect our health, need to know we can trust in the purity of those foods. Thank you.
